

How to use mask packaging bags during the epidemic

2020 is special year for all of us, masks become product in short supply during the epidemic. Driven by the sales of masks, the demand for mask packaging bags is also increasing. At present, we must not only guarantee hygiene for mask packaging bags. but also increasing requirements of mask packaging bags' aesthetic. The quality and the beauty of packaging bags also make our mask products more popular. Regarding this trend, what are the characteristics of high-quality mask packaging bags? 5 points are considered .

1. Protect mask

A high-quality packaging bag can guarantee the various technical properties required by the mask, such as corresponding air permeability, chemical stability, physical and mechanical properties, airtightness (measured by a sealing tester), shading, and its hygiene and safety.

2. Adaptability of production process

It can meet the requirements of packaging mechanization and automated production processes: such as material disinfection and sterilization, forming and sealing, and other processes to ensure the production efficiency and packaging quality.

3. Promote sales

With good sales appearance and printing adaptability, it helps to increase the value of masks, making them attractive and competitive in the market.
